ECR Network Academic Promotions Panel Session

Take-Aways

Listen to the full Preparing for Academic Promotions recording

What is the panel seeking?

- To understand why you should be promoted
- To understand your research story

Do:

Before the interview

- Bring along any relevant information about achievements since your application (eg publications accepted)
- Prepare to tell your research story* and make a case for why you should be promoted, including objective evidence** of your claims.
- Be aware of the unique contribution you bring to the organisation: believe in yourself.
- Be well-versed in what you have presented in your written application (i.e. what is your teaching philosophy? what is your contribution to your discipline?)
- Understand the different categories and what they mean.
- Consider a range of potential questions and prepare some answers:
  - Expect a question from each of the five categories, however expect more questioning around the areas you’ve expressed strength.
  - Use the criteria and categories as a guide to what you will be asked. The panel will focus on those areas for which you are claiming the highest self-assessment scores (especially those categories where you are claiming a 3).
  - Some specific examples of questions include: why do you deserve this? and what has changed since you submitted your application?
- Rehearse your pitch / Practice before the interview – with peers, family, friends and meet with your mentor.
- Consider preparing and rehearsing with a group of others going for promotion and invite senior researchers to play the role of review panel and take on this feedback
- Find out who will be on the panel (take the list in with you – you can expect around eight people). Make sure you know where the interview will be held and ensure you get there in plenty of time so as not to feel rushed.
During the interview

- Share your story and don’t be afraid to show your passion
- Make your research program clear.
- Give a sense of the big picture of the field your research fits into and who benefits.
- Make a case for why you should be promoted.
- State what challenges you have met through your work and how you have met them (as opposed to providing a check list of what you have done).
- Make statements that are based on objective evidence**
- Manage your nerves (as best you can) – see ‘before interview’ preparation tips above. Remember that the panel wants you to present your best self.
- However – nerves will not be counted against you.
- Communicate your story and experience at an appropriate level - not everyone will be an expert in your particular discipline

After the interview:

- Debrief with your peer group (see ‘before interview’ preparation above)
- The Chair will give you feedback when they give you the results (whether positive or negative). Don’t hesitate to follow up with further requests for feedback if you need it.
  - Note, one of our panellists met their mentor by doing this!
- Remember that a panel of eight Macquarie researchers now know about you and your research – this is a good thing!

* your research story

Your journey, told concisely and positively, that explains why you do what you do...

- where have you come from?
- where you are now?
- what have you learnt along the way?
- where you are going and why?
- consider the breadth of your academic experience, not just focusing on one area
- consider how your research fits into the overall scheme of things (particularly with regard to integration and application).

**objective evidence

Concrete examples and results that can substantiate your claims, e.g. “by serving on x committee I have brought about the following positive changes...”
ECR Network Academic Promotions Panel Session

Take-Aways

Don’t:

- Put down others
- Approach it as ‘it’s my turn’ – you need to make the case for promotion
- Complain
- Use jargon or technical language
- Focus on what you will do if promoted (rather than what you are currently doing or what you have already achieved)
- Show lack of commitment to your work
- Be too succinct or go on too long – find the right balance: you can make the offer “I can expand further if you would like me to”.
- Overuse “we” (i.e. ‘we have attracted $x funding”. The panel wants to know about you)
- Approach the interview as an interrogation – it is a conversation and the panel are interested in knowing more about you.
